

## Tip #6 Why the Corner Sub is Better

Atlantic has come out with an innovative and different product called the 10 CSB In-corner subwoofer. It sounds consistently better than conventional subs and solves most of the usual appearance/decor problems that people object to about big box subwoofers.

### Advantages

1. Corner-mounting reinforces the bass output. Think of each major room boundary (a floor, wall, or ceiling) as an “acoustic mirror” that reinforces the sound and think of the subwoofer as an “acoustic lightbulb.” Regular subs are usually located at the junction of two such boundaries (the floor and one wall). So the light is reflected (magnified, if you will) by two mirrors.

But put that same lightbulb in the corner, and now you have **THREE** mirrors reflecting the light. More. Better. Louder.

2. The sound of the Corner Sub is optimized for its location. The sound of a conventional sub varies greatly depending on where it's placed in a room. Put it near a corner, it sounds one way. Put it halfway down the wall, it sounds completely different. Neither may be correct or satisfying. But our Corner Sub has special circuitry to make it sound great in the corner--**BECAUSE WE KNOW THAT'S WHERE IT'S GOING!**

3. It looks better than a “Big Black Box.” The shape is far less noticeable, and you can paint the cabinet to match the room.

The sub uses 3-surfaces to amplify it's output
