

# Installation Just Got Easier

## with EZFrame™

Embedded magnets in the frame hold the grill securely in place.

# EZFrame™

The grill and outside speaker baffle are **ONE PIECE.**

Install the speaker like normal and simply attach the EZ Frame. Done.

Like all of our products, one priority is to make the install quick and easy. Well, our new EZFrame™ (patent pending) has definitely taken care of that. A revised version of the EZGrill, the EZFrame now makes grill installation a few seconds job. No more fumbling around trying to tuck the grill in on one side and then working around hoping to get the grill put in without bending it.

The EZFrame speakers consist of two main pieces: the main speaker and the grill piece. The main speaker install is like a typical in-ceiling speaker. To install the grill, just place it up near the speaker, line up the magnets, and put it in place. The magnets pull it onto the speaker and securely hold it there. *A typical 15 minute job now takes less than a minute.*

**TRU AUDIO**  
Turn up the volume

These TruAudio speakers feature the new patent-pending EZFrame technology:

---

R1-6 and R1-8

R2-6 and R2-8

R3-6 and R3-8

RD1-6 and RD1-8

RD3-6 and RD3-8

- Aluminum grill prevents rusting
- One piece frame and grill makes for easy painting or replacing
- One piece frame and grill sold separately for easy stocking

- No paint shield needed
- All models feature TruAudio exceptional sound quality
- Greatly cuts down on labor costs
- Multiple products in series

Because we were installers long before we ever built speakers, our products offer installation-friendly features which make your job easier. The EZFrame system is just one more innovative idea that makes our speakers a “little nicer” than the rest.
